Category Name Design-Planning

Actionee HAIS

Sub Category

Subject Dynamic Replanning should be optional

Description of Problem or Suggestion:

The site should be able to enable and disable dynamic replanning. There also needs to be a "skewing threshold" which will automatically disable dynamic replanning when it gets x% out of whack with the original plan.

HAIS Response Date 5/16/95

The need to enable and disable any dynamic planning capability and for thresholds within which to operate the capability is recongized. The detailed design for dynamic replanning is still being worked. In particular, issues still surround the potential use operations staff would make of this capability (in lieu of manual replanning). In addition, dynamic replanning changes the processing targets, possibly making the reporting against those targets less useful. The impact on the reporting requirements, therefore, also must be assessed. The detailed approach for this capability will be worked with the DAACs in the context of the activity described in RID response 358. The final definition of the capability will be documented in the CDR detailed design.
